Introducing queries

INTRODUCTION TO SQL

Izzy Weber
Curriculum Manager, DataCamp

What is SQL useful for?

patrons

| card_num | name | member_year | total_fine |
|----------|--------|-------------|------------|
| 54378 | Izzy | 2012 | 9.86 |
| 94722 | Maham | 2020 | 0 |
| 45783 | Jasmin | 2022 | 2.05 |
| 90123 | James | 1989 | 0 |

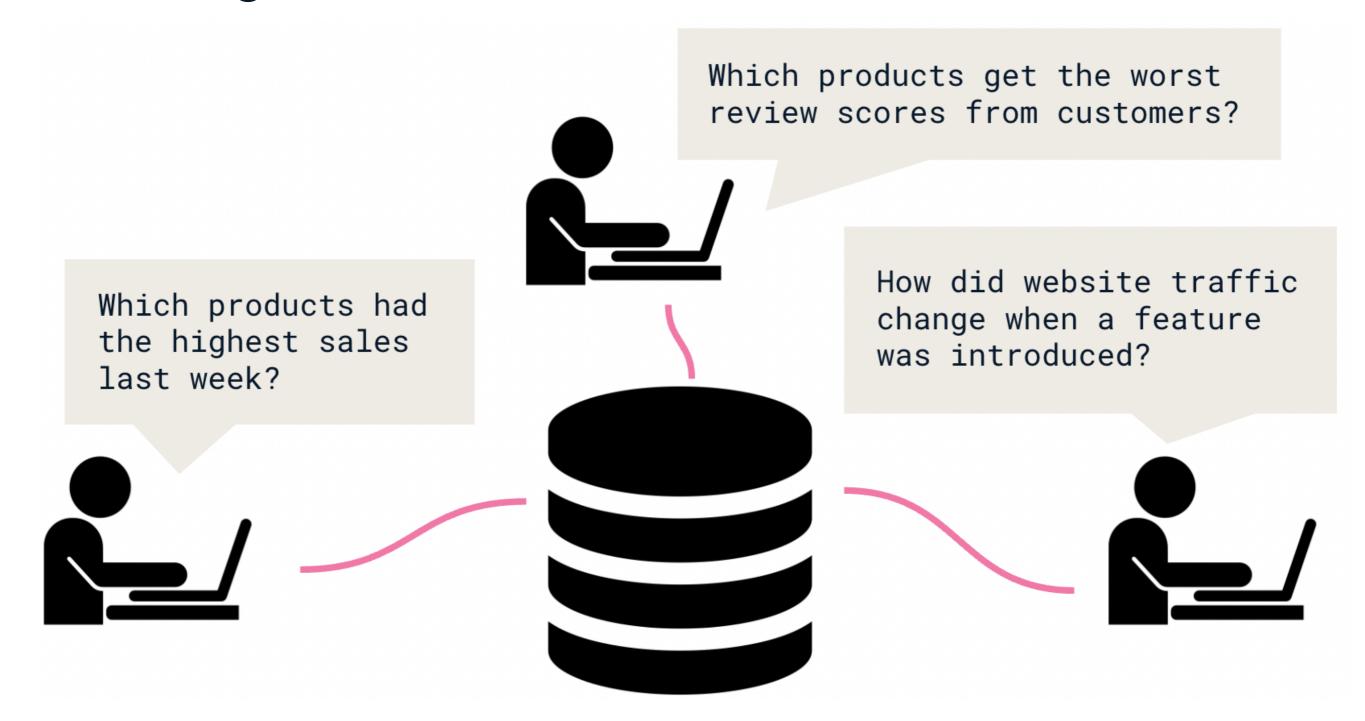

books

| id | title | author | genre | pub_year |
|-----|---------------------------|----------------|-------------|----------|
| 638 | Being Mortal | Atul Gawande | Non-Fiction | 2015 |
| 912 | Educated | Tara Westover | Non-Fiction | 2018 |
| 322 | Night | Elie Wiesel | Non-Fiction | 1956 |
| 156 | Where the Wild Things Are | Maurice Sendak | Childrens | 1963 |

checkouts

| id | start_date | due_date | card_num | book_id |
|-----|------------|------------|----------|---------|
| 567 | 2022-05-13 | 2022-05-27 | 54378 | 638 |
| 568 | 2022-06-10 | 2022-06-24 | 54378 | 322 |
| 569 | 2022-06-27 | 2022-07-11 | 45783 | 156 |
| 570 | 2022-08-14 | 2022-08-28 | 90123 | 912 |

Best for large datasets

Keywords

Keywords are reserved words for operations

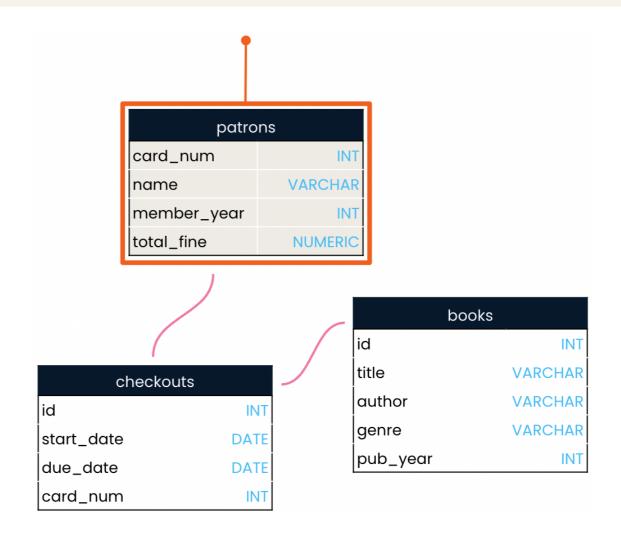

Common keywords: SELECT, FROM

FROM patrons

Our first query

```
SELECT name
FROM patrons;
```

patrons

| card_num | name | member_year | total_fine |
|----------|--------|-------------|------------|
| 54378 | Izzy | 2012 | 9.86 |
| 94722 | Maham | 2020 | 0 |
| 45783 | Jasmin | 2022 | 2.05 |
| 90123 | James | 1989 | 0 |

• Query results often called *result set*

Selecting multiple fields

```
SELECT card_num, name
FROM patrons;
```

```
SELECT name, card_num
FROM patrons;
```

Selecting multiple fields

```
SELECT name, card_num, total_fine
FROM patrons;
```

Selecting all fields

```
SELECT *
FROM patrons;
```

```
card_num | name | member_year | total_fine |
54378
        Izzy
                 2012
                              9.86
94722
        Maham
                 2020
                               0
45783
        | Jasmin | 2022
                              2.05
90123
        James
                 1989
                               0
```

Let's practice!

INTRODUCTION TO SQL

Writing queries

INTRODUCTION TO SQL

Izzy WeberCurriculum Manager, DataCamp

Aliasing

Use *aliasing* to rename columns

```
SELECT name AS first_name, year_hired
FROM employees;
```

Selecting distinct records

```
SELECT year_hired
FROM employees;
```

```
SELECT DISTINCT year_hired
FROM employees;

| vear hired |
```

```
| year_hired |
|-----|
| 2020 |
| 2017 |
| 2022 |
| 2021 |
| 2020 |
| 2021 |
```

```
| year_hired |
|-----|
| 2020 |
| 2017 |
| 2022 |
| 2021 |
```

DISTINCT with multiple fields

employees

| id | name | dept_id | job_level_id | year_hired |
|-------|---------|---------|--------------|------------|
| 54378 | Darius | 1 | 3 | 2020 |
| 94722 | Raven | 2 | 3 | 2017 |
| 45783 | Eduardo | 2 | 1 | 2022 |
| 90123 | Maggie | 3 | 2 | 2011 |
| 67284 | Amy | 2 | 2 | 2009 |
| 26148 | Meehir | 3 | 3 | 2021 |

```
SELECT dept_id, year_hired
FROM employees;
```

DISTINCT with multiple fields

```
SELECT DISTINCT dept_id, year_hired
FROM employees;
```

Views

- A view is a virtual table that is the result of a saved SQL SELECT statement
- When accessed, views automatically update in response to updates in the underlying data

```
CREATE VIEW employee_hire_years AS
SELECT id, name, year_hired
FROM employees;
```

Using views

```
SELECT id, name
FROM employee_hire_years;
```

```
id
      name
54378
      Darius
94722 | Raven
45783 | Eduardo |
90123 | Maggie
67284 | Amy
26148 | Meehir
```

Let's practice!

INTRODUCTION TO SQL

SQL flavors

INTRODUCTION TO SQL

Izzy WeberCurriculum Manager, DataCamp

SQL flavors

- Both free and paid
- All used with relational databases
- Vast majority of keywords are the same
- All must follow universal standards
- Only the additions on top of these standards make flavors different

¹ Table flatlay photo created by freepik www.freepik.com

Two popular SQL flavors

PostgreSQL

- Free and open-source relational database system
- Created at the University of California, Berkeley
- "PostgreSQL" refers to both the PostgreSQL database system and its associated SQL flavor

SQL Server

- Has free and paid versions
- Created by Microsoft
- T-SQL is Microsoft's SQL flavor, used with SQL Server databases

Comparing PostgreSQL and SQL Server

Like dialects of the same language

PostgreSQL:

```
SELECT id, name
FROM employees
LIMIT 2;
```

Example: limiting number of results

SQL Server:

```
SELECT TOP(2) id, name
FROM employees;
```

Choosing a flavor

Just like with ice cream, any flavor is probably a good choice!

Let's practice!

INTRODUCTION TO SQL

Congratulations!

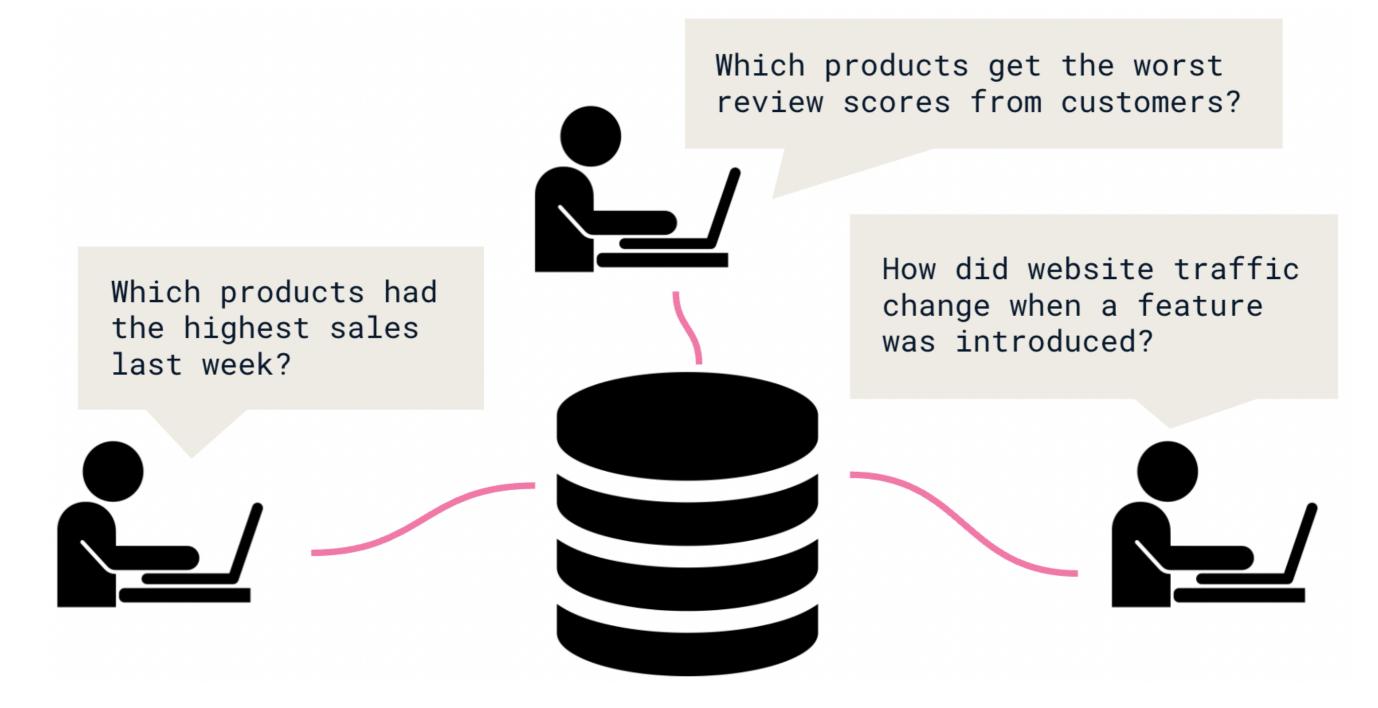

INTRODUCTION TO SQL

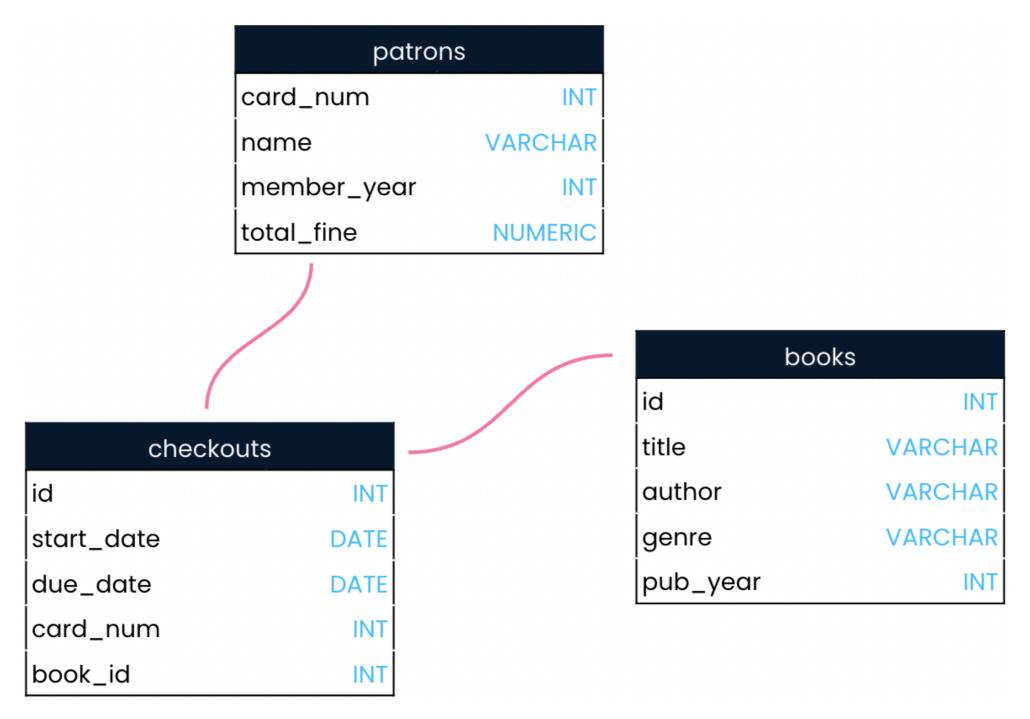

Izzy WeberCurriculum Manager, DataCamp

What you've learned

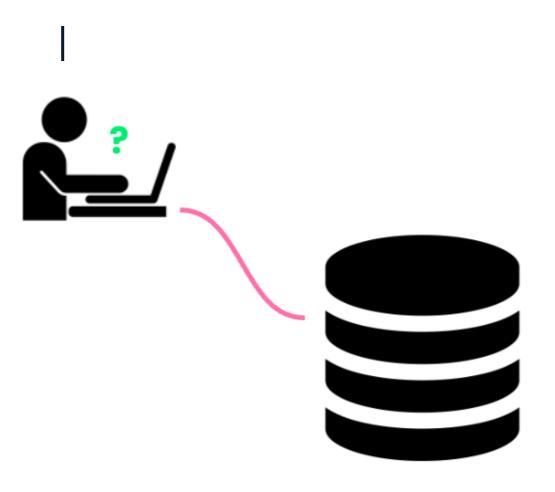

What you've learned

What you've learned

```
SELECT DISTINCT genre AS unique_genre
FROM books
LIMIT 15;
```

Where to go next

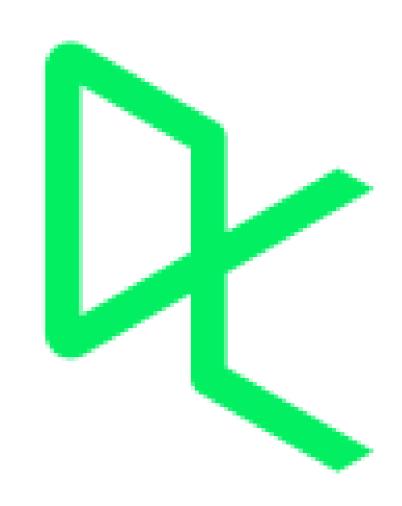

The next step is to learn more keywords and to choose which flavor you'll learn them in!
